HYPERLOOP

DECEMBER
2021

Long time no see!

Hello, good to see you! It's been a while since we last sent out some updates. The last two years have been extraordinary to say the least. As we all know, the restrictions had us compelled to adapt to a new way of working and progress stagnated within many businesses. But of course that didn't stop us. Through digital means we have managed to stay on track and never stopped working hard on our mission. However, through the wonders of science, politics and healthcare the world is finally getting back on track. It is with gratitude aimed towards all researchers and medical personnel that we in KTH Hyperloop rise from the fading ashes of Covid, more ready than ever to show the world what we have been working on. Thank you for your patience.

New marketing team

First off, we would like to inform you that there is a brand new marketing team onboard, and you are currently reading their first newsletter. After weeks of planning we have a solid strategy to achieve our purpose as the link between the team and the outside world. We are more excited than ever to make sure you are well informed of the progress KTH Hyperloop is making. Our web designers and media creators are hard at work, constantly refining our platforms, so whether you visit our website or like our posts on Instagram, you can count on us!

However, that's not all. 2022 will be the year we start sending out our very own Magazine. In it you will find updates from the team, interviews with our members and news from the world of hyperloop. Consider our first letter to be the last and look forward to a more fun way of taking part in our work. We sincerely hope you will enjoy this changeup.

You're invited!

On Tuesday December 14th at 18.00 the first quarterly summary of the semester will be held. We will present all the progress we've made so far and each subteam will provide you with detailed information of their respective achievements. In order to make it easier for you to attend the event it will be kept digital – you can find the code below. We look forward to showing you the results of our hard work. Hope to see you there!

What's ahead?

The cold is creeping in on us as the end of 2021 draws near and we at KTH Hyperloop look forward to a new year of progress and development. We are happy to see the world getting back to normal after such a global challenge as Covid 19, but with that comes other problems. When travelling is getting back to normal, emissions will increase. This makes it more clear to us that our mission is necessary if there is to be a future in which neither humans nor nature is compromised. Hyperloop is the answer, and we are happy to announce that our main objective for the new year is to manufacture our first prototype. All subteams have been working hard and will continue to do so until the goal is reached. We at marketing will make sure you are well informed about the journey so grab your popcorn and take a seat. You're in for a ride!
